

ATLANTIC STATES MARINE FISHERIES COMMISSION

REVIEW OF THE INTERSTATE FISHERY MANAGEMENT PLAN

FOR BLACK SEA BASS *(Centropristis striata)*

2020 FISHING YEAR

Prepared by the Plan Review Team
Approved September 2021

Sustainable and Cooperative Management of Atlantic Coastal Fisheries

2020 Review of the ASMFC Fishery Management Plan for Black Sea Bass

I. Status of the Fishery Management Plan

Atlantic States Marine Fisheries Commission (ASMFC or Commission) management of black sea bass was initiated as one component of a multi-species fishery management plan (FMP) addressing summer flounder, scup, and black sea bass. In 1990, summer flounder was singled out for immediate action under a joint ASMFC and Mid-Atlantic Fishery Management Council (MAFMC or Council) plan. Further action on the scup and black sea bass plan was delayed until 1992 to expedite the summer flounder FMP and subsequent amendments. The joint Black Sea Bass FMP was completed and approved in 1996. The MAFMC approved regulations for black sea bass as Amendment 9 to the Summer Flounder FMP in May 1996.

The management unit of the Black Sea Bass FMP includes all black sea bass in U.S. waters in the western Atlantic Ocean from Cape Hatteras, North Carolina north to the Canadian border. The Commission's Summer Flounder, Scup, and Black Sea Bass Management Board (or Board) and the MAFMC guide development of the FMP. New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Delaware, Maryland, Virginia, and North Carolina have declared an interest in black sea bass; Maine and New Hampshire declared interest in 2014, then declined interest in the fishery in 2017 and 2018, respectively. New Hampshire re-declared an interest in 2020 and rejoined the Board in 2021. The Black Sea Bass Plan Review Team conducts annual reviews and monitors compliance, and the Summer Flounder, Scup and Black Sea Bass Advisory Panel provides industry input and advice. Technical issues are addressed through the Summer Flounder, Scup, and Black Sea Bass Technical and Monitoring Committees.

The objectives of the FMP are to reduce fishing mortality to ensure overfishing does not occur, reduce fishing mortality on immature black sea bass to increase spawning stock biomass, improve yield from the fishery, promote compatible regulations among states and between federal and state jurisdictions, promote uniform and effective enforcement, and minimize regulations necessary to achieve the stated objectives. The initial [Black Sea Bass FMP \(1996\)](#) aimed to reduce fishing mortality using a coastwide commercial quota allocated into quarterly periods beginning in 1998, and a recreational harvest limit constrained through the use of minimum size, possession limit, and seasonal closures.

[Amendment 12](#) to the Summer Flounder, Scup, and Black Sea Bass FMP was approved by the Commission and MAFMC in October 1998. The Amendment revised overfishing definitions, identified and described essential fish habitat, and defined the framework adjustment process.

[Addendum IV](#), approved in 2001, provides that upon the recommendation of the relevant monitoring committee and joint consideration with the Council, the Board will decide state regulations rather than forward a recommendation to NMFS. Addendum IV also made the states responsible for implementing the Board's decisions on regulations.

Starting in 1998, the fishery was subject to lengthy closures and had some significant quota overages in the commercial sector. Fishery closures occurring as a result of exceeded quotas resulted in increased discards of legal sized black sea bass in mixed fisheries for the remainder of the closed period. A significant financial hardship for the fishing industry resulted from a decrease in market demand caused by a fluctuating supply. To address these issues, the Board enacted a series of Emergency Rules in 2001 that established initial possession limits, triggers, and adjusted possession limits. These measures helped reduce the length of fishery closures, but the rapidly changing regulations confused fishermen and added significant administrative burden to the states. To simplify the process for all parties, the Board approved Addendum VI to provide a mechanism for initial possession limits, triggers, and adjusted possession limits to be set during the annual specification setting process without the need for further Emergency Rules.

[Amendment 13](#), approved by ASMFC and MAFMC in 2002, implemented a federal, annual coastwide commercial quota that is managed in state waters by ASMFC using a state-by-state allocation system. The Amendment was implemented for 2003 and 2004. State-specific commercial shares are listed in Table 1. Amendment 13 also removed the necessity for fishermen who have both a Northeast Region (NER, now referred to as the Greater Atlantic Region) Black Sea Bass permit and a Southeast Region (SER) Snapper Grouper (S/G) permit to relinquish their permits for a six-month period prior to fishing south of Cape Hatteras during a northern closure.

[Addendum XII](#), approved in 2004, continued the use of an annual coastwide commercial quota managed by the ASMFC through a state-by-state allocation system.

[Addendum XIII](#) and the MAFMC's complementary Framework 5, approved in 2004, modified the FMP so that Total Allowable Landings (TALs) for the summer flounder, scup, and/or black sea bass can be specified for up to three years.

[Addendum XIX](#), approved in 2007, continued the state-by-state black sea bass commercial management measures, without a sunset clause. This addendum, and the MAFMC's complementary Framework 7, also broadened the descriptions of stock status determination criteria contained within the Summer Flounder, Scup, and Black Sea Bass FMP to allow for greater flexibility in those definitions, while maintaining objective and measurable status determination criteria for identifying when stocks or stock complexes covered by the FMP are overfished. It established acceptable categories of peer-review for stock status determination criteria. When these specific peer-review metrics are met and new or updated information is available, the new or revised stock status determination criteria may be incorporated by the Commission directly into the annual management measures for each species, rather than requiring a modification to the FMP.

[Addendum XX](#), approved in 2009, set policies to reconcile commercial quota overages to address minor inadvertent quota overages. It streamlined the quota transfers process and established clear policies and administrative protocols to guide the allocation of transfers from

states with underages to states with overages. It also allowed for commercial quota transfers to reconcile quota overages after the year's end.

Beginning in 2011 due to concerns about equitable access to the resource, a series of addenda replaced the use of uniform coastwide measures to manage the recreational fishery. [Addendum XXI](#) established state shares of the recreational harvest limit (RHL) for 2011. [Addenda XXII](#), [XXIII](#), [XXV](#), and [XXVII](#) implemented an ad hoc regional management approach for 2012-2017, whereby the northern region states of Massachusetts through New Jersey individually crafted state measures aimed at liberalizing or reducing harvest by the same percent to achieve the RHL, while the southern region states of Delaware through North Carolina largely set regulations consistent with the measures set for federal waters.

For 2018, [Addendum XXX](#) established a regional allocation of the coastwide RHL to address state concerns regarding equity and accountability in recreational black sea bass management. Based on a combination of exploitable biomass information from the latest stock assessment and historical harvest, the RHL was allocated to three regions: 1) Massachusetts through New York, 2) New Jersey as a state-specific region, and 3) Delaware through North Carolina. The 2018 state recreational measures were then revised in May 2018 following an appeal of the Addendum to the ISFMP Policy Board by Massachusetts, Rhode Island, Connecticut and New York.

In December 2018, the Board approved [Addendum XXXI](#) (and the Council approved corresponding Framework 14), which modified the FMP to allow federal conservation equivalency (i.e., waiving federal waters measures in favor of state waters measures) as an option for the recreational black sea bass fishery beginning in 2020, and implemented transit provisions for Block Island Sound for recreational and commercial fisheries for summer flounder, scup, and black sea bass in the same area as the existing striped bass transit zone. The Council's framework action also modified the Council's FMP to allow a maximum size limit to be used in the recreational fisheries for summer flounder and black sea bass.

[Addendum XXXII](#), approved in December 2018, established a new process for developing recreational management measures for black sea bass and summer flounder whereby measures will be set annually through a specifications process, rather than addenda. The Board will approve measures in early spring each year, based on Technical Committee analysis of stock status, resource availability, and harvest estimates. To further aid in setting specifications, the Addendum established standards and guiding principles intended to structure the development of recreational measures on a regional basis. Public input on specifications will be gathered by states through their individual public comment processes.

In February 2021, the Board approved [Addendum XXXIII](#) jointly with the Council making changes to black sea bass commercial state allocations. These changes have not been implemented. Connecticut's baseline allocation increased to 3% of the coastwide quota. State allocations will be calculated by allocating 75% of the coastwide quota according to new, adjusted baseline quotas after the increase to Connecticut. The other 25% of quota will be

allocated to three regions (Maine-New York, New Jersey, and Delaware-North Carolina) based on the most recent regional biomass distribution from the stock assessment. The Council approved a complementary amendment to include the state specific commercial allocations in the Council FMP, along with modifications to regulations for federal in-season closures; this amendment has not yet undergone NOAA Fisheries review. Currently, the baseline quotas are undergoing an appeal from the state of New York, and will change pending a review by the Board.

In April 2021, the Commission and Council considered final action on the Summer Flounder, Scup and Black Sea Bass Commercial/Recreational Allocation Amendment which considers potential modifications to the allocations of catch or landings between the commercial and recreational sectors for the three species. The current commercial and recreational allocation percentages for all three species do not reflect the current understanding of the recent and historic proportions of catch and landings from the two sectors. This amendment will consider whether changes to these allocations are warranted. The Commission and Council postponed final action on the amendment until December 2021 to allow for further development of the recreational reform initiative.

II. Status of the Stock

The most recent benchmark stock assessment for black sea bass was peer reviewed in December 2016 (SAW-62). The assessment found black sea bass was not overfished nor experiencing overfishing in 2015, the terminal year of the assessment. The assessment used an age-structured assessment model (ASAP) that partitioned the resource into two spatial sub-units separated at approximately Hudson Canyon. This approach was accepted as the best scientific information available for determining stock status for black sea bass; however, it should be noted that the two sub-units were not considered separate stocks by the stock assessment working group, peer review panel, nor the MAFMC Scientific and Statistical Committee.

A management track assessment that incorporated fishery-dependent and -independent data through 2019, including revised recreational estimates from MRIP, was peer reviewed in July 2021¹. The management track assessment was limited to data through 2019 due to the COVID-19 pandemic. Data from 2020 was either not available or limited. Based on the prepublication version of the July 2021 Management Track Assessment Report, the black sea bass stock north of Cape Hatteras, North Carolina was not overfished and overfishing was not occurring in 2019 relative to the revised reference points. Spawning stock biomass (SSB) in 2019 was 65.63 million pounds (adjusted for retrospective bias), 2.1 times the updated biomass reference point (i.e., $SSB_{MSY\ proxy} = SSB_{40\%} = 31.84$ million pounds). To account for the fact that black sea bass are protogynous hermaphrodites, changing sex from female to male, the assessment defines SSB as the combined male and female mature biomass. The average fishing mortality on fully selected ages 6-7 fish in 2019 was 0.39 (adjusted for retrospective bias), 85% of the updated fishing

¹ The prepublication report for the 2021 Operational Assessment can be found here: https://apps-nefsc.fisheries.noaa.gov/saw/sasi/uploads/BSB_Operational_assessment_2021-iii.pdf

mortality threshold reference point (i.e., $F_{MSY\ proxy} = F_{40\%} = 0.46$). Recruitment (R) of the 2018 year class as age 1 in 2019 was estimated at 4.62 million (79.4 million with the retrospective adjustment), above the 1989-2018 time series average of 39 million fish. The 2011 year class was estimated to be the largest in the time series at 170.4 million fish and the 2015 year class was the second largest at 93.8 million fish. The 2019 estimates of SSB, F, and R were adjusted for internal model retrospective error.

III. Status of the Fishery

The commercial fishery is allocated 49% of the total allowable landings (TAL) for black sea bass, loosely based on the proportion of recreational to commercial landings from 1983-1992. The principal gears used in the fishery are otter trawls, fish pots (or traps), and handlines. After peaking at 21.8 million pounds in 1952, commercial landings markedly decreased in the 1960s and have ranged from 1.14 to 3.9 million pounds since 1981. In 1998, a commercial quota system was incorporated into management and state-by-state shares were introduced in 2003. From 2006-2016 commercial landings ranged between 1.14 million pounds in 2009 to 2.53 million pounds in 2016 (Tables 2 and 3). In 2018 and 2019, higher quotas resulted in commercial landings of approximately 3.33 million pounds, and 3.52 million pounds, respectively. The 2020 landings were under the coastwide quota of 5.58 million pounds by approximately 25% (Tables 2 and 3)¹.

The recreational fishery is allocated 51% of the TAL for black sea bass, loosely based on the proportion of recreational to commercial landings from 1983-1992. In 2018, recreational harvest estimates from the Marine Recreational Information Program (MRIP) were recalibrated based on the new Fishing Effort Survey (FES). In general the recalibration resulted in higher harvest estimates throughout the time series, with more divergence in recent years. After a drastic peak in 1986 at 11.19 million pounds, recreational harvest averaged 5.02 million pounds annually from 1987 to 1997. Recreational harvest limits were put in place in 1998 and harvest generally increased from 1.92 million pounds in 1998 to 9.06 million pounds in 2015 (Table 4). In 2016 and 2017 harvest jumped up to 12.05 and 11.48 million pounds, respectively; however the 2016 and 2017 estimates are regarded as implausibly high outliers by the Technical Committee. In 2020, recreational harvest was estimated at 9.12 million pounds, a 5% increase from 2019. Recreational live discards as a proportion of total catch have generally increased over the time series, averaging 46% in the 1980s, and 85% over the last decade. According to MRIP, total live recreational discards from Maine to Virginia were 29.79 million fish in 2020. Assuming 15% hook and release mortality, estimated recreational discard losses were projected to be 4.47 million fish, equal to 51% of the total recreational removals (harvest plus dead discards) in 2020. However, it is worth noting that due to COVID-19 pandemic, shore-side sampling was interrupted and some MRIP values contain imputed data.

Starting in 2018, the Council and Commission have provided states the opportunity to open their recreational black sea bass fisheries during the month of February under specific

¹ Commercial landings for 2020 are preliminary and are derived from state compliance reports.

conditions. States must opt into this fishery. Participating states are required to have a 12.5 inch minimum fish size limit and a 15 fish possession limit during February (identical to the federal recreational measures during May 15 - December 31). Participating states are required to adjust their recreational management measures during the rest of the year to account for expected February harvest to help ensure that the participation in this optional opening does not increase the total annual harvest. Expected February harvest by state is pre-defined based on an analysis of vessel trip report data from federally permitted for-hire vessels in February 2013, the last year that the recreational fishery was open in February prior to 2018. Only Virginia and North Carolina participated in 2020. Estimated February 2020 harvest was 14,236 pounds for Virginia and 50,692 pounds for North Carolina. As part of the 2020 conservation equivalency (CE) proposal, Virginia forfeited 14 days from wave-3 (May/June) and North Carolina forfeited 31 days from wave 6 (November/December) to account for the recreational landings that occurred in February of that year.

IV. Status of Assessment Advice

A management track stock assessment was peer reviewed in June 2021, and may be accepted for management use in July 2021. According to the assessment, the black sea bass stock north of Cape Hatteras, North Carolina was not overfished and overfishing was not occurring in 2019 compared to the revised reference points. The next stock assessment will be a research track assessment that will be peer reviewed in late 2022.

V. Status of Research and Monitoring

Commercial landings information is collected by the Vessel Trip Reporting system and dealer reports along with state collected landings data. The Northeast Fisheries Science Center (NEFSC) uses observer data to estimate discards for the trawl and gill net fisheries, and VTR data is used to estimate discards from pots and hand lines if observer data are insufficient. The NEFSC weigh-out program provides commercial age and length information. Recreational landings and discards were estimated through the Marine Recreational Fisheries Statistics Survey (MRFSS) until it was replaced by MRIP, which has provided recreational landings and discards from 2008 to present. In 2018, MRIP released recalibrated harvest estimates derived from a new mail-based fishing effort survey (FES), rather than the Coastal Household Telephone Survey. Recreational discards in weight are estimated by the NEFSC. New York conducts fishery-dependent surveys of the recreational and commercial fishery, and North Carolina conducts dockside commercial sampling.

Fishery-independent surveys are conducted by Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Delaware, Maryland, and Virginia. The Virginia Game Fish Tagging Program has targeted black sea bass since 1997. Recruitment and stock abundance data are also provided by the NEFSC spring, autumn, and winter trawl surveys.

VI. Status of Management Measures and Developing Issues

To address broad management issues for the recreational fishery, the Board and Council formed a joint work group in March 2019. The Board and Council identified the development of a Harvest Control Rule for the recreational fishery as their top priority, and a joint PDT/FMAT is currently working on revisions. Updates on ongoing recreational reform work can be found on [here](#).

VII. Black Sea Bass Compliance Criteria

2020 Commercial Fishery Requirements

Minimum size of possession: 11"

Minimum mesh: Nets must possess a minimum of 75 meshes of 4.5" diamond mesh in the codend, or the entire net must have a minimum mesh size of 4.5" throughout; for codends with fewer than 75 meshes, the entire net must have 4.5" diamond mesh or larger throughout

Threshold to trigger minimum mesh requirements: 500 lbs for January-March and 100 lbs for April-December

Maximum roller rig trawl roller diameter: 18"

Pot and trap escape vents: 2 ½" for circular, 2" for square, and 1-3/8 x 5-3/4" for rectangular. Must be 2 vents in the parlor portion of the trap.

Pot and trap degradable fastener provisions: a) untreated hemp, jute, or cotton string 3/16" (4.8 mm) or smaller; b) magnesium alloy timed float releases or fasteners; c) ungalvanized, uncoated iron wire of 0.094" (2.4mm) or smaller. The opening covered by a panel affixed with degradable fasteners is required to be at least 3" x 6".

Commercial quota: 5.58 million lbs

Pot and trap definition: A black sea bass pot or trap is defined as any pot or trap used by a fisherman to catch and retain black sea bass.

2020 Recreational Fishery Requirements

Recreational harvest limit: 5.81 million lbs

2020 recreational measures were held status quo from 2019. See Table 5 for 2020 state recreational measures.

Other Measures

Reporting: States are required to submit an annual compliance report to the Chair of the Black Sea Bass Plan Review Team by June 1st. The report must detail the state's management program for the current year and establish proof of compliance with all mandatory management measures. It should include landings information from the previous year and the results of any monitoring or research programs.

Black Sea Bass FMP Compliance Schedule*

Commercial	
11" Size Limit	1/1/02
4.5" diamond minimum mesh throughout codend and threshold provisions	1/1/02
Pot and trap escape vents and degradable fasteners	1/1/97
Maximum 18" roller diameter restriction	1/1/97
States must report to NMFS all landings from state waters	1/1/98
Recreational	
Size Limit	1/1/97
Harvest Limit	1/1/98
Ability to implement possession limits and seasonal closures	1/1/98
General	
Annual compliance report	Annually, 6/1

*This summary of compliance criteria is intended to serve as a quick reference guide. It in no way alters or supersedes compliance criteria as contained in the Black Sea Bass FMP and any Amendments thereto. Management measures may change annually.

VIII. Status of Implementation of FMP Requirements

For 2020, states and jurisdictions required to comply with the provisions of the Black Sea Bass FMP are: Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Delaware, Maryland, Potomac River Fisheries Commission, Virginia, and North Carolina.

Most states appear in compliance with the FMP provisions for fishing year 2020; however, the following issues were noted:

- Massachusetts regulations do not specify that the opening covered by the panel affixed with biodegradable fasteners must be at least 3" x 6". This was adopted prior to the start of the 2021 pot fishery season.
- Rhode Island regulation does not specifically state that the opening covered by the panel affixed with biodegradable fasteners must be at least 3" x 6". This will be rectified during the regulatory cycle leading up to the November 2021 public hearing.

Therefore, the PRT determined that all states have made a good faith effort to implement regulations in compliance with the requirements approved by the Board.

In addition, the PRT made the following recommendations to improve compliance reports:

- State compliance reports should explicitly list all required regulations and whether they are in compliance with the FMP.
- State compliance reports should either include a web link to current regulations, or a copy of the regulations in effect for the relevant fishing year to facilitate the review

process. Not all states provided their regulations. When regulations encompass multiple species, the portions that apply to black sea bass should be highlighted in some way.

- Pots/traps should be separated from other types of gear in the commercial harvest by gear tables included in compliance reports.

IX. Research Recommendations

Research recommendations were identified during the [2016 Black Sea Bass Benchmark Stock Assessment at the 62nd SAW](#) (pg. 65)

*Harvest is from north of Hatteras.

**These states participated in the February 2018-2020 black sea bass recreational fishery, and the February harvest estimate is not included in the state total for 2019 and 2020.

Figure 1. Black Sea Bass Total Recreational Catch, Harvest, and Discards. Source: MRIP, June 2021. Note that this figure includes live and dead discards. It is assumed that 15% of all recreational black sea bass discards later die.

*Discard estimates for NC north of Cape Hatteras are not yet available.

Table 5. 2020 Black Sea Bass Recreational Management Measures by State

State	Minimum Size (inches)	Possession Limit	Open Season
Maine	13	10 fish	May 19-September 21; October 18-December 31
New Hampshire	13	10 fish	January 1-December 31
Massachusetts	15	5 fish	May 18-September 8 (private & shore); May 25-September 21 (for-hire only)
Rhode Island	15	3 fish	June 24-August 31
		7 fish	September 1-December 31
Connecticut (Private & Shore)	15	5 fish	May 19-December 31
CT (Authorized party/charter monitoring program vessels)	15	5 fish	May 19-August 31
		7 fish	September 1-December 31
New York	15	3 fish	June 23-August 31
		7 fish	September 1-December 31
New Jersey	12.5	10 fish	May 15-June 22
		2 fish	July 1-August 31
		10 fish	October 8-October 31
	13	15 fish	November 1-December 31
Delaware	12.5	15 fish	May 15 – September 21; October 22 – December 31
Maryland	12.5	15 fish	May 15-December 31
Virginia	12.5	15 fish	February 1-29
	12.5	15 fish	May 29-December 31
North Carolina, North of Cape Hatteras (N of 35° 15'N)	12.5	15 fish	February 1-29
	12.5	15 fish	May 17-November 30
Minimum Federal Measures	12.5	15 fish	February 1-28 May 15-December 31
