## I. Status of the Fishery Management Plan

| Date of FMP Approval: | Original FMP - 1981 |
| :---: | :---: |
| Amendments: | Amendment 1-1984 <br> Amendment 2-1984 <br> Amendment 3-1985 <br> Amendment 4 - 1989; Addendum I - 1991, Addendum II - 1992, <br> Addendum III - 1993, Addendum IV - 1994 <br> Amendment 5 - 1995; Addendum I - 1997, Addendum II - 1997, <br> Addendum III - 1998, Addendum IV - 1999, Addendum V - 2000 <br> Amendment 6 - 2003; Addendum I - 2007, Addendum II - 2010, <br> Addendum III - 2012, Addendum IV - 2014, Addendum VI -2019 |
| Management Unit: | Migratory stocks of Atlantic striped bass from Maine through North Carolina |
| States With Declared Interest: | Maine - North Carolina, including Pennsylvania |
| Additional Jurisdictions: | District of Columbia, Potomac River Fisheries Commission, National Marine Fisheries Service, United States Fish and Wildlife Service |
| Active Boards/Committees: | Atlantic Striped Bass Management Board, Advisory Panel, Technical Committee, Stock Assessment Subcommittee, Tagging Subcommittee, Plan Review Team, and Plan Development Team |

The Atlantic States Marine Fisheries Commission (Commission) developed a Fisheries Management Plan (FMP) for Atlantic Striped Bass in 1981 in response to poor juvenile recruitment and declining landings. The FMP recommended increased restrictions on commercial and recreational fisheries, such as minimum size limits and harvest closures on spawning grounds. Two amendments were passed in 1984 recommending additional management measures to reduce fishing mortality. To strengthen the management response and improve compliance and enforcement, the Atlantic Striped Bass Conservation Act (P.L. 98-613) was passed in late 1984. The Striped Bass Act ${ }^{1}$ mandated the implementation of striped bass regulations passed by the Commission and gave the Commission authority to recommend to the Secretaries of Commerce and Interior that states be found out of compliance when they failed to implement management measures consistent with the FMP.

The first enforceable plan under the Striped Bass Act, Amendment 3, was approved in 1985, and required size regulations to protect the 1982 year class - the first modest size cohort since the previous decade. The objective was to increase size limits to allow at least $95 \%$ of the females in the 1982 year class to spawn at least once. Smaller size limits were permitted in producer areas than along

[^0]the coast. Several states, beginning with Maryland in 1985, opted for a more conservative approach and imposed a total moratorium on striped bass landings for several years. The amendment contained a trigger mechanism to relax regulations when the 3-year moving average of the Maryland juvenile abundance index (JAI) exceeded an arithmetic mean of 8.0 - which was attained with the recruitment of the 1989 year class. Also, in 1985, the Commission determined the Albemarle Sound-Roanoke River (A-R) stock in North Carolina contributed minimally to the coastal migratory population, and was therefore allowed to operate under an alternative management program.

Amendment 4, implemented in 1989, aimed to rebuild the resource rather than maximize yield. The amendment allowed state fisheries to reopen under a target fishing morality ( $F$ ) of 0.25 , which was half the estimated $F$ needed to achieve maximum sustainable yield (MSY). The amendment allowed an increase in the target F once spawning stock biomass (SSB) was restored to levels estimated during the late 1960s and early 1970s. The dual size limit concept was maintained (coastal versus producer areas), and a recreational trip limit and commercial season was implemented to reduce the harvest to $20 \%$ of that in the historic period of 1972-1979. A series of four addenda were implemented from 1990-1994 to maintain protection of the 1982 year class.

In 1990, to provide additional protection to striped bass and ensure the effectiveness of state regulations, NOAA Fisheries passed a final rule (55 Federal Register 40181-02) prohibiting possession, fishing (catch and release fishing), harvest, and retention of Atlantic striped bass in the Exclusive Economic Zone (EEZ), with the exception of a defined transit zone within Block Island Sound. Atlantic striped bass may be transported through this defined area provided that the vessel is not used to fish while in the EEZ and the vessel remains in continuous transit, and that the fish were legally caught in adjoining state waters.

In 1995, the Atlantic striped bass migratory stock was declared recovered by the Commission (the A-R stock was declared recovered in 1997) and Amendment 5 was adopted to increase the target $F$ to 0.33, midway between the existing $F$ target ( 0.25 ) and $F_{\text {MSy. }}$ Target $F$ was allowed to increase again to 0.40 after two years of implementation. Regulations were developed to achieve the target $F$ (which included measures to restore commercial harvest to 70\% of the average landings during the 1972-1979 historical period) and states were allowed to submit proposals to implement alternative regulations that were deemed conservationally equivalent to the Amendment 5 measures. From 1997-2000, a series of five addenda were implemented to respond to the latest stock status information and adjust the regulatory program to achieve each change in target $F$.

In 2003, Amendment 6 was adopted to address five limitations within the existing management program: 1) potential inability to prevent the Amendment 5 exploitation target from being exceeded; 2) perceived decrease in availability or abundance of large striped bass in the coastal migratory population; 3) a lack of management direction with respect to target and threshold biomass levels; 4) inequitable effects of regulations on the recreational and commercial fisheries, and coastal and
producer area sectors; and 5) excessively frequent changes to the management program. Accordingly, Amendment 6 completely replaced the existing FMP for Atlantic striped bass. ${ }^{2}$

The goal of Amendment 6 is "to perpetuate, through cooperative interstate management, migratory stocks of striped bass; to allow commercial and recreational fisheries consistent with the long-term maintenance of a broad age structure, a self-sustaining spawning stock; and also to provide for the restoration and maintenance of their essential habitat." In support of this goal, the following objectives are included:

1. Manage striped bass fisheries under a control rule designed to maintain stock size at or above the target female spawning stock biomass level and a level of fishing mortality at or below the target exploitation rate.
2. Manage fishing mortality to maintain an age structure that provides adequate spawning potential to sustain long-term abundance of striped bass populations.
3. Provide a management plan that strives, to the extent practical, to maintain coastwide consistency of implemented measures, while allowing the States defined flexibility to implement alternative strategies that accomplish the objectives of the FMP.
4. Foster quality and economically viable recreational, for-hire, and commercial fisheries.
5. Maximize cost effectiveness of current information gathering and prioritize state obligations in order to minimize costs of monitoring and management.
6. Adopt a long-term management regime that minimizes or eliminates the need to make annual changes or modifications to management measures.
7. Establish a fishing mortality target that will result in a net increase in the abundance (pounds) of age 15 and older striped bass in the population, relative to the 2000 estimate.

Amendment 6 modified the F target and threshold, and introduced a new set of biological reference points (BRPs) based on female SSB, as well as a list of management triggers based on the BRPs. The coastal commercial quotas were restored to $100 \%$ of the states' average landings during the 19721979 historical period, except for Delaware's coastal commercial quota which remained at the level allocated in $2002^{3}$. In the recreational fisheries, all states were required to implement a two-fish bag limit with a minimum size limit of 28 inches, except for the Chesapeake Bay fisheries, North Carolina fisheries that operate in the A-R, and states with approved alternative regulations. The Chesapeake Bay and $A-R$ regulatory programs were predicated on a more conservative $F$ target than the coastal migratory stock, which allowed these states/jurisdictions (hereafter states) to implement separate seasons, harvest caps, and size and bag limits as long as they remain under that $F$ target. No minimum

[^1]size limit can be less than 18 inches under Amendment 6. The same minimum size standards regulate the commercial fisheries as the recreational fisheries, except for a minimum 20 inch size limit in the Delaware Bay spring American shad gillnet fishery.

States are permitted the flexibility to deviate from these regulations by submitting conservation equivalency proposals to the Plan Review Team (PRT). All proposals are subject to technical review and approval by the Atlantic Striped Bass Management (Board). It is the responsibility of the state to demonstrate through quantitative analysis that the proposed management program is equivalent to the standards in the FMP, or will not contribute to the overfishing of the resource.

Five addenda to Amendment 6 have been implemented. Addendum I, approved in 2007, established a bycatch monitoring and research program to increase the accuracy of data on striped bass discards and recommended development of a web-based angler education program. Also in 2007, President George W. Bush issued an Executive Order (E.O. 13449) prohibiting the sale of striped bass (and red drum) caught within the EEZ. Addendum II was approved in 2010 and established a new definition of recruitment failure such that each index would have a fixed threshold rather than a threshold that changes annually with the addition of each year's data. Addendum III was approved in 2012 and requires all states with a commercial fishery for striped bass to implement a uniform commercial harvest tagging program. The Addendum was initiated in response to significant poaching events in the Chesapeake Bay and aims to limit illegal harvest of striped bass.

Addendum IV was triggered in response to the 2013 benchmark assessment, which indicated a steady decline in SSB since the mid-2000s. The Addendum established new F reference points, and changed commercial and recreational measures to reduce $F$ to a level at or below the new target. Chesapeake Bay fisheries were required to implement lower reductions than coastal states ( $20.5 \%$ compared to $25 \%$ ) since their fisheries were reduced by $14 \%$ in 2013 based on their management program. The addendum maintained the flexibility to implement alternative regulations through the conservation equivalency process. This practice has resulted in a variety of regulations among states. All states promulgated regulations prior to the start of their 2015 seasons.

Addendum VI was initiated in response to the 2018 benchmark assessment which indicates the stock is overfished and experiencing overfishing ${ }^{4}$. Approved in October 2019, the Addendum aims to reduce total removals by $18 \%$ relative to 2017 levels in order to achieve F target in 2020. Specifically, the Addendum reduces all state commercial quotas by $18 \%$, and implements a 1 fish bag limit and a 28 "to less than $35^{\prime \prime}$ slot limit for ocean fisheries and a 1 fish bag limit and an $18^{\prime \prime}$ minimum size limit in Chesapeake Bay to reduce total recreational removals by $18 \%$ in both regions. The Addendum's

[^2]measures are designed to apply the needed reductions proportionally to both the commercial and recreational sectors, although states were permitted to submit alternative regulations through conservation equivalency that achieve an $18 \%$ reduction in total removals statewide. The Board reviewed and approved management options for 2020 on a state-by-state basis in February, and all states promulgated regulations by April 1.

Addendum VI also requires the mandatory use of circle hooks when fishing with bait to reduce release mortality in recreational striped bass fisheries. States are encouraged to promote the use of circle hooks through various public outreach and education platforms to garner support and compliance with this important conservation measure. In October 2020, the Board approved state implementation plans for circle hook requirements, with the caveat that no exemptions to Addendum VI mandatory circle hook requirements will be permitted. Circle hook regulations were required to be implemented no later than January 1, 2021. In March 20215, the Board approved a clarification on the definition of bait and methods of fishing ${ }^{6}$ that require circle hooks, which must be implemented by states as part of Addendum VI compliance. Per Commission standards, states can implement more restrictive measures. The Board also approved guidance ${ }^{7}$ on how to address incidental catch of striped bass when targeting other species with non-circle hooks with bait attached. This guidance is not a compliance criterion since incidental catch was not originally part of Addendum VI.

## Under Development: Draft Amendment 7

In August 2020, the Board initiated development of Amendment 7 to the FMP. The purpose of the amendment is to update the management program in order to reflect current fishery needs and priorities given the status and understanding of the resource and fishery has changed considerably since implementation of Amendment 6 in 2003. The Board intends for the amendment to build upon the Addendum VI action to end overfishing and initiate rebuilding. In February 2021, the Board approved for public comment the Public Information Document (PID) for Draft Amendment 7. As the first step in the amendment process, the PID was a broad scoping document seeking public input on a number of important issues facing striped bass management. After the PID public comment period that included 11 virtual public hearings and more than 3,000 submitted comments, the Board approved in May 2021 the following issues for development in Draft Amendment 7: recreational release mortality, conservation equivalency, management triggers, and measures to protect the 2015 year class. The Plan Development Team (PDT) is currently developing options for these four issues for inclusion in a draft amendment document. The Board will meet in August 2021 to review the PDT's progress on the Draft Amendment and recommend any further changes to the document. Based on progress made on the Draft Amendment, the Board's next opportunity to meet and consider possible approval of the document for public comment will be in October 2021.

[^3]
## II. Status of the Stocks

The 2018 benchmark stock assessment for Atlantic striped bass was peer-reviewed at the $66^{\text {th }}$ Northeast Regional Stock Assessment Workshop (SAW)/Stock Assessment Review Committee (SARC) meeting in November 2018. The assessment addressed several of the recommendations from the $57^{\text {th }}$ SAW/SARC, including developing new maturity-at-age estimates for the coastal migratory stock and evaluating stock status definitions relative to uncertainty in biological reference points (NEFSC 2018a). The assessment also made progress on developing a spatially and temporally explicit catch-at-age model incorporating tag-based movement (migration) information. Although the Peer Review Panel did not accept the migration model for management use, it recommended continued work to improve the model for future assessments.

The accepted model is a forward projecting statistical catch-at-age (SCA) model which uses catch-atage data and fishery-dependent and -independent survey indices to estimate annual population size and fishing mortality (NEFSC 2018b). Indices of abundance track relative changes in the population over time while catch data provide information on the scale of the population size. Age structure data (numbers of fish by age) provide additional information on recruitment (number of age-1 fish entering the population) and trends in mortality.

The biological reference points (BRPs) currently used for management are based on the 1995 estimate of female spawning stock biomass (SSB). The 1995 estimate of female SSB is used as the SSB threshold because many stock characteristics (such as an expanded age structure) were reached by this year and the stock was declared recovered. The SSB target is equal to $125 \%$ of SSB threshold. To estimate the associated fishing mortality ( $F$ ) threshold and target, population projections were made by using a constant F and changing the value until the SSB threshold or target was achieved. For the 2018 benchmark, the BRP values have been updated. The benchmark incorporates the newly calibrated recreational catch estimates based on the Marine Recreational Information Program's (MRIP) Fishing Effort Survey (FES), resulting in higher estimates of SSB and therefore higher estimates for the SSB threshold and target (refer to Section III for more information). The SSB threshold is estimated at 91,436 metric tons ( 202 million pounds), with an SSB target of 114,295 metric tons ( 252 million pounds). The new MRIP estimates did not have a large effect on the estimates of fishing mortality, and the updated $F$ threshold and target values are very similar to the previous $F$ reference points. The $F$ threshold is estimated at 0.24 , and the target is estimated at 0.20

Based on the results of the 2018 benchmark, Atlantic striped bass is overfished and experiencing overfishing. In 2017, female SSB was estimated at 68,476 metric tons ( 151 million pounds) which is below the SSB threshold (Figure 1). Female SSB declined steadily since the time series high in 2003 and has been below threshold since 2013. The recent decline in female SSB appears to be attributed to a period of low recruitment since about 2005 (Figure 1). However, the 2011, 2014, and 2015 year classes (representing the 2012, 2015, and 2016 age-1 recruitment estimates) were above average. Total F was estimated at or above $F$ threshold in 13 of the last 15 years, and was estimated above threshold in 2017 at 0.31 (Figure 2).

## III. Status of the Fishery in the Ocean and Chesapeake Bay

In 2020, total Atlantic striped bass removals (commercial and recreational, including harvest, commercial discards and recreational release mortality) was estimated at 5.1 million fish, which is a $7 \%$ decrease relative to 2019 (Table 3; Figure 5). The recreational sector accounted for $87 \%$ of total removals by number. It should be noted that the recreational catch estimates reported here reflect the new, improved MRIP mail-based survey and are not directly comparable to FMP Review reports published prior to 2019.

The commercial fishery harvested 3.56 million pounds ( 577,363 fish) in 2020 , which is a $17 \%$ decrease by weight relative to 2019 ( $12 \%$ decrease by number; Table 4; Table 5). This decrease aligns with the $18 \%$ reduction in commercial quotas implemented through Addendum VI in 2020, although some states implemented a different level of reduction in their commercial quotas through approved state conservation equivalency plans. The ocean quota utilization was about the same in 2020 ( $53 \%$ ) as in 2019 (51\%), while the Chesapeake Bay quota utilization decreased to $76 \%$ in 2020 from $91 \%$ in 2019. Despite the coastwide decrease in commercial harvest, ocean fishery conditions for some states may have improved from 2019 to 2020, which could be attributed to the increased availability of year classes moving through certain areas. The impacts of COVID-19 on the striped bass commercial fishery likely varied among states and varied depending on timing within the season. Some states heard from industry that restaurant closures and low prices had negative impacts on the commercial season, particularly during the early part of the pandemic.

Commercial harvest from Chesapeake Bay accounted for 64\% of the total commercial harvest by weight; Maryland landed $38 \%$, Virginia landed $19 \%$, and NY landed $13 \%$ (Table 5; Figure 6). Additional harvest came from PRFC (11\%), Massachusetts (11\%), Delaware (4\%), and Rhode Island (3\%). The proportion of commercial harvest coming from Chesapeake Bay is much higher in numbers of fish; roughly $85 \%$ in 2020 (Table 6). This is because fish harvested in Chesapeake Bay have a lower average weight than fish harvested in ocean fisheries. Coastwide commercial dead discards were estimated at $65,319^{8}$ fish, which accounts for <2\% of total removals in 2020 (Table 3).

Total recreational catch (harvest and live releases) was estimated at 32.4 million fish in 2020, which is a $5 \%$ increase from 2019 (Table 7). Total recreational harvest ( $A+B 1$ ) in 2020 is estimated at 1.71 million fish ( 14.8 million pounds), and represents a $21 \%$ decrease relative to 2019 ( $37 \%$ decrease by weight) (Table 8; Table 9). Maryland landed the largest proportion of recreational harvest in number of fish ${ }^{9}$ (43\%), followed by New Jersey (30\%), New York (12\%), and Massachusetts (4\%), and Connecticut (4\%) (Table 9). The proportion of recreational harvest in numbers from Chesapeake Bay was estimated at $46 \%$ in 2020, compared to $38 \%$ in 2019.

[^4]The vast majority of recreational striped bass catch is released alive either due to angler preference or regulation (i.e., undersized or already caught the bag limit) (Figure 7). The assessment assumes, based on previous studies, that $9 \%$ of fish that are released alive die as a result of being caught. In 2020, recreational anglers caught and released an estimated 30.7 million fish, of which 2.8 million are assumed to have died (Table 7). This represents a 7\% increase relative to 2019.

The PRT noted that the ocean and Chesapeake Bay regions had different levels of recreational harvest reductions in 2020. The ocean region saw a $31 \%$ decrease in recreational harvest in numbers of fish, while the Bay experienced only a 3\% decrease compared to 2019 (Table 7). According to MRIP, the overall number of trips directed at striped bass (primary and secondary target) were similar from 2019 to 2020 ( $\sim 2 \%$ increase) on a coastwide scale (Table 11). However, the Chesapeake Bay fishery experienced a $36 \%$ increase in targeted trips ( 711,535 more trips) from 2019 to 2020 . The number of targeted trips in the Chesapeake Bay in 2020 was similar to the number in 2017 and 2018. The PRT noted that COVID-19 may have impacted recreational sectors differently in 2020. For-hire trips may have been limited due to restrictions on the number of people permitted on vessels; however, anecdotally, shore and private trips may have increased. It is important to recognize that impacts from COVID-19 were likely not uniform across states or sectors.

## IV. Albemarle Sound and Roanoke River Management Area

## Fishery Management Plan

While striped bass in North Carolina's ocean waters are managed under the Interstate FMP, Addendum IV to Amendment 6 formally defers management of the A-R stock to the state of North Carolina using A-R stock-specific BRPs approved by the Board (NCDMF 2013, 2014).

Estuarine striped bass in North Carolina are currently managed under Amendment 1 to the North Carolina Estuarine Striped Bass Fishery Management Plan (FMP) and its subsequent revision and recent supplement (NCDMF 2013, 2014, 2019). It is a joint plan between the North Carolina Marine Fisheries Commission (NCMFC) and the North Carolina Wildlife Resources Commission (NCWRC). Amendment 1, adopted in 2013, lays out separate management strategies for the Albemarle Sound-Roanoke River (AR) stock and the estuarine (non-migratory) Central and Southern striped bass stocks in the Tar-Pamlico, Neuse, and Cape Fear rivers. Management programs in Amendment 1 utilize annual total allowable landings (TAL), daily possession limits, open and closed harvest seasons, gill net mesh size and yardage restrictions, seasonal small mesh gill net attendance requirements, single barbless hook requirements in some areas, minimum size limits, and a no-harvest slot limit in the Roanoke River to maintain a sustainable harvest and reduce regulatory discard mortality in all sectors. Striped bass fisheries in the Atlantic Ocean of North Carolina are managed under ASMFC's Amendment 6 and subsequent addenda to the Interstate FMP for Atlantic Striped Bass. Amendment 6 also requires North Carolina to inform the Commission of changes to striped bass management in the A-R System.

## Albemarle Sound-Roanoke River Striped Bass Stocks

The most recent A-R stock assessment a forward-projecting fully-integrated, age-structured statistical model to estimate population parameters and reference points for the A-R striped bass stock for 19912017. The model was peer reviewed by an outside panel of experts and approved for management use
by the Board in May 2021. The A-R stock is managed using reference points for female spawning stock biomass (SSB) and fishing mortality (F) with threshold values based on $35 \%$ spawning potential ratio and target values based on $45 \%$ spawning potential ratio. The 2020 assessment estimated female SSB in 2017 (terminal year) was 78,576 pounds ( 35.6 metric tons), which is below the SSB threshold of 267,390 pounds ( 121 metric tons). The assessment estimated $F$ in 2017 was 0.27 , which is above the $F$ threshold of 0.18 . These results show that the stock is overfished and overfishing is occurring (Figures 3 and 4).

|  | Target | Threshold | Terminal Year (2017) <br> Estimate |
| :--- | :---: | :---: | :---: |
| Female SSB | $350,371 \mathrm{lbs}$. | $267,390 \mathrm{lbs}$. | $78,576 \mathrm{lbs}$. |
| Fishing Mortality (F) | 0.13 | 0.18 | 0.27 |

Based on the assessment results, North Carolina implemented a 2020 Revision to Amendment 1 that lowers the annual TAL for Albemarle Sound and Roanoke River management areas for 2021 and 2022 in order to reduce $F$ to the target level. The new TAL is 51,216 pounds, which is a $57 \%$ reduction from 2017 landings (NCDMF 2020).

## Albemarle Sound and Roanoke River Atlantic Striped Bass Fisheries

In 2020, total commercial and recreational harvest in the Albemarle Sound Management Area (ASMA) and the Roanoke River Management Area (RRMA) was 167,161 pounds ( 40,090 fish). Commercial harvest in the ASMA was 124,385 pounds ( 26,900 fish). Recreational harvest in the ASMA was 25,450 pounds ( 7,656 fish), and recreational harvest in the RRMA was 17,326 pounds ( 5,534 fish). However, due to COVID-19 restrictions, the recreational creel survey in the ASMA ended March 27 instead of April 30 and the creel survey in the RRMA ended March 18 instead of ending in Mid-May. No attempt was made to develop harvest or release estimates for the remainder of the season in either management area.

## V. Status of Research and Monitoring

Amendment 6 and its Addenda $\mathrm{I}-\mathrm{VI}$ set the regulatory and monitoring measures for the coastwide striped bass fishery in 2020. Amendment 6 requires certain states to implement fishery-dependent monitoring programs for striped bass. All states with commercial fisheries or substantial recreational fisheries are required to define the catch and effort composition of these fisheries. Additionally, all states with a commercial fishery must implement a commercial harvest tagging program pursuant to Addendum III to Amendment 6.

Amendment 6 also requires certain states to monitor the striped bass population independent of the fisheries. Juvenile abundance surveys are required from Maine (Kennebec River), New York (Hudson River), New Jersey (Delaware River), Maryland (Chesapeake Bay tributaries), Virginia (Chesapeake Bay tributaries), and North Carolina (Albemarle Sound). Spawning stock sampling is mandatory for New York (Hudson River), Pennsylvania (Delaware River), Delaware (Delaware River), Maryland (Upper Chesapeake Bay and Potomac River), Virginia (Rappahannock River and James River), and North Carolina (Albemarle Sound-Roanoke River). Amendment 6 requires NOAA Fisheries, USFWS,

Massachusetts, New York, New Jersey, Maryland, Virginia, and North Carolina to continue their tagging programs, which provide data used to determine survivorship and migration patterns.

## VI. Status of Management Measures and Issues

## Coastal Commercial Quota

In 2020, the ocean commercial quota was $2,411,154$ pounds and was not exceeded. Table 10 contains final 2020 quotas per Addendum VI and approved conservation equivalency programs and harvest that occurred in 2020.

## Chesapeake Bay Commercial Quota

In 2020, the Chesapeake Bay-wide quota was 2,998,374 pounds and was allocated to Maryland, the PRFC, and Virginia based on historical harvest. In 2020, the Bay-wide quota was not exceeded. Table 10 contains jurisdiction-specific quotas and harvest that occurred in 2020 for Chesapeake Bay. In 2020, commercial harvest from Chesapeake Bay accounted for $64 \%$ of total commercial landings by weight, and averaged 61\% annually under Addendum IV (2015-2019).

## Chesapeake Bay Spring Harvest of Migrant Striped Bass

Historically, recreational fishermen in Chesapeake Bay are permitted to take adult migrant fish during a limited seasonal fishery, commonly referred to as the Spring Trophy Fishery. From 1993 to 2007 the fishery operated under a quota. Beginning in 2008, the Board approved non-quota management until stock assessment indicates that corrective action is necessary to reduce $F$ on the coastal stock. The Spring Trophy Fishery is currently managed via bag limits and minimum sizes. The Commonwealth of Virginia closed the spring trophy season beginning in 2019.

The 2020 estimate of migrant fish harvested during the Maryland trophy season was 6,947 fish (1,395 fish by charter boats; 5,552 fish by private anglers), which is a 49\% decrease compared to 2019.

## Wave-1 Recreational Harvest Estimates

Evidence suggests that North Carolina, Virginia, and possibly other states have had sizeable wave-1 (January/February) recreational striped bass fisheries beginning in 1996 (NEFSC 2018b). MRIP, formerly the Marine Recreational Fisheries Statistics Survey (MRFSS), has sampled for striped bass in North Carolina during wave-1 since 2004 (other states are not currently covered during wave-1). Virginia harvest in wave-1 is estimated for stock assessment via the ratio of landings and tag returns in wave-6 and regression analysis (refer to the methods described in NEFSC 2018a for more detail).

However, based on fishery-independent data collected by NCDMF, ASMFC and USFWS, striped bass distributions on their overwintering grounds during December through February has changed significantly since the mid-2000s. The migratory portion of the stocks has been well offshore in the EEZ (>3 miles) effecting both Virginia's and North Carolina's striped bass winter ocean fisheries in recent years. Furthermore, North Carolina has reported zero recreational striped bass harvest during wave-1 in the ocean for 2012-2020, and Virginia has reported zero ocean harvest for six of the last seven years. Similarly, North Carolina's commercial fishery has reported zero striped bass landings from the ocean during that time.

## Addendum II: Juvenile Abundance Index Analysis

The following states are required to conduct striped bass young-of-year juvenile abundance index (JAI) surveys on an annual basis: Maine for the Kennebec River; New York for the Hudson River; New Jersey for the Delaware River; Maryland for the Maryland Chesapeake Bay tributaries; Virginia for the Virginia Chesapeake Bay tributaries; and North Carolina for the A-R stock.

The PRT and the Striped Bass Technical Committee (TC) annually review trends in all required JAls. The definition of recruitment failure is a value that is below $75 \%$ (the first quartile, or Q1) of all values in a fixed time series appropriate to each juvenile abundance index (see Addendum I/ for details). If any survey's JAI falls below their respective Q1 for three consecutive years, appropriate action should be recommended by the TC to the Management Board.

For the 2021 review of JAls, the analysis evaluates the 2018, 2019, and 2020 JAI values. One state (North Carolina) met the criteria for recruitment failure in 2020 (Figure 8). North Carolina's JAI values for 2018 (0.40), 2019 (1.20), and 2020 (0.02) were below its respective Q1 (1.33). Maine's JAI was below its respective Q1 value in 2019 and 2020 and Maryland's JAI value was below its respective Q1 value in 2020. Although New York's JAI value was below its respective Q1 in 2019, its value in 2020 was almost double its long-term average. Virginia's JAI value in 2020 was also above its respective longterm average (Figure 8). New Jersey was unable to conduct its juvenile abundance survey due to COVID-19 so a 2020 JAI value for New Jersey is not available.

The 2020 assessment for the A-R stock recognized the declining recruitment trend and noted that harvest does not appear to be the only factor contributing to the decline (Lee et al. 2020). The assessment's peer reviewers identified other factors, specifically flow conditions and predation by blue catfish, which could be impacting recruitment. The TC met in July 2021 to review potential factors contributing to $A-R$ recruitment declines and to consider recommending action to the Management Board. Considering North Carolina's recent management action to reduce striped bass total allowable landings for the Albemarle Sound and Roanoke River management areas (NCDMF 2020) as well as ongoing monitoring and analysis of river flow impacts on recruitment, the TC recommended no action by the Board at this time.

## Addendum III: Commercial Fish Tagging Program

Addendum III to Amendment 6 includes compliance requirements for monitoring commercial fishery harvest tagging programs. In 2020, all states implemented commercial tagging programs consistent with the requirements of Addendum III. Table 17 describes commercial tagging programs by state. The PRT notes that in multiple states, only about half, or less than half in some cases, of issued commercial tags were reported used. The PRT emphasizes the importance of tag accounting to account for unused tags at the end of each fishing year. In Maryland, although unused tags are normally required to be returned in order for an audit to be conducted, this was not possible due to COVID-19. Maryland noted this audit may be revisited as conditions allow. Maryland reported 250,736 tags used out of 497,820 issued. The PRT recommends that Commission staff work with the Law Enforcement Committee and the PRT to regularly follow-up with all states on tag accounting and other questions about state commercial tagging programs as needed.

## Addendum VI: 18\% Reduction in Removals

2020 was the first implementation year of Addendum VI, which implemented measures to reduce total striped bass removals by $18 \%$ relative to 2017 levels in order to achieve the fishing mortality target in 2020. Tables 12a-12c list total removals (harvest plus discards/release mortality for commercial and recreational) in numbers of fish for 2017 and 2020. In 2020, a $27.5 \%$ reduction in total removals coastwide (numbers of fish) was realized relative to total removals coastwide in 2017. For the ocean region, a $33 \%$ reduction in total removals (numbers of fish) was realized relative to 2017 removals. For the Chesapeake Bay, an $18 \%$ reduction in total removals (numbers of fish) was realized relative to 2017 removals.

Tables 13 and 14 list the realized change for recreational removals (in numbers of fish) and commercial harvest (in pounds) by state from 2017 to 2020. Table 13 also includes the predicted reduction in recreational removals from state conservation equivalency plans, where applicable. The PRT notes that differences in performance are influenced by many factors, including changes in effort, fish availability/year classes, and environmental factors. The TC has discussed the challenge of trying to evaluate performance since the effects of different management measures cannot be isolated from the effects of effort changes and fish availability. There is a lot of year-to-year variability even under consistent regulations due to different year classes moving through the stock and variability in effort and angler behavior. During the TC's review of Addendum VI conservation equivalency proposals, the TC noted there is a high level of uncertainty in the percent reductions calculated due to the effect of changes in angler behavior (effort) and the size structure and distribution of the population (availability of legal and sub-legal fish), and these changes are difficult to account for and cannot be accurately quantified.

## Note on 2020 MRIP Data

The component of the Marine Recreational Information Program (MRIP) that samples dockside catch rate data (Access Point Angler Intercept Survey - APAIS) was interrupted by the pandemic. Due to this interruption, catch rate data were imputed as needed from 2018 and 2019 to generate total catch estimates in 2020. The contribution of imputed data for Atlantic striped bass recreational harvest and release estimates by state ranged from 0-100\% (Table 15).

## Addendum VI: Circle Hook Requirement

Addendum VI circle hook regulations were required to be implemented by the states in January 2021. In March 2021, the Board approved a clarification on the definition of bait and methods of fishing that require circle hooks, which must be implemented by states as part of Addendum VI compliance. The PRT notes differences among the definitions of bait implemented by the states (Table 16) with some definitions being more restrictive than the Board-approved definition. A few states have not defined bait, which could be considered more restrictive (per Commission standards, states can implement more restrictive measures). Additionally, some state regulations are more restrictive by not specifying any exemptions, as compared to the Board-approved exemption for bait on artificial lures.

In March 2021, the Board also approved guidance on how to address incidental catch of striped bass when targeting other species with non-circle hooks with bait attached. Although this guidance is not a
compliance criterion since incidental catch was not originally part of Addendum VI , several states have already implemented this guidance (Table 16).

The PRT notes that New Jersey's rule to implement the circle hook requirements has been delayed in the regulatory process and is expected to be fully implemented by October 4, 2021. New Jersey was unable to implement the circle hook requirement through the timelier Notice of Administrative Change (NOAC) process, which is typically used to maintain compliance with FMPs, because recreational gear modifications are not authorized to be completed through the NOAC process. Therefore, New Jersey added the circle hook requirement to an existing rulemaking proposal that was published in the NJ Register on March 1, 2021 for a public comment period that ended April 30, 2021. The rulemaking adoption formally launched Friday, July 9, 2021 and includes 30 review days for each the NJDEP Commissioner and the Governor's Office, and projects a target filing date of September 10, 2021, in the NJ Register, with a final adoption upon publication on October 4, 2021.

## Law Enforcement Reporting

States are asked to report and summarize law enforcement cases that occurred the previous season in annual compliance reports. In 2020, reported law enforcement cases (e.g., the number of warnings and citations) were similar to those reported in previous years. The most common violations were recreationally harvested fish under the legal size limit and possessing fish in excess of the bag limit.

## VII. Plan Review Team Comments and Recommendations

- Based on annual state compliance reports (ASMFC 2021), the PRT determined that all states in 2020 implemented a management and monitoring program consistent with the provisions of Amendment 6 and Addenda I-VI, with one inconsistency noted below.
- As identified in last year's FMP Review (ASMFC 2020), the PRT notes one inconsistency with 2020 implementation of the Addendum VI slot limit. New York's recreational regulations for 2020 (and for 2021) state a slot limit of " $28^{\prime \prime}$ to $35^{\prime \prime} T L$ ". This does not explicitly indicate whether the upper limit is inclusive or not.
- The PRT notes that Maryland's 2021 summer closure period (no targeting July 16-31) is different from their approved 2020 summer closure period (no targeting August 16-31).
- A summary of 2020 fishery regulations by state is provided in Table 1 and Table 2. Each state's commercial tag monitoring program is described in Table 17, and state compliance with fisheryindependent and -dependent monitoring requirements are summarized in Table 18.
- As described in the commercial tagging section, the PRT notes that in multiple states, only half or less than half of issued commercial tags were reported used. The PRT emphasizes the importance of tag accounting to account for unused tags at the end of each fishing year. In Maryland, although unused tags are normally required to be returned in order for an audit to be conducted, this was not possible due to COVID-19. Maryland noted this audit may be revisited as conditions allow. Maryland reported 250,736 tags used out of 497,820 issued. The PRT recommends that Commission staff work with the Law Enforcement Committee and the PRT to regularly follow-up with all states on tag accounting and other questions about state commercial tagging programs as needed.
- As described in the Addendum VI section, the PRT notes the following about the circle hook requirements implemented in 2021:
- There are differences among the definitions of bait implemented by the states (Table 16), with some more restrictive than others.
- Several states have implemented the guidance on incidental catch, which is not a compliance criterion since incidental catch was not originally part of Addendum VI.
- New Jersey's rule for the circle hook requirements has been delayed in the regulatory process and is expected to be fully implemented by October 4, 2021.
- The PRT notes that while the New York spawning stock monitoring program in the Hudson River does meet the FMP's fishery-independent monitoring requirements, it does not provide an index of relative abundance to characterize the Hudson River stock which was identified as a high priority research recommendation at SAW 66.
- Finally, the PRT notes that many fishery monitoring efforts in 2020 have been impacted due to the COVID-19 pandemic, including fishery-independent surveys, APAIS interviews, and sampling of commercial and recreational catch. Table 18 notes which 2020 programs were impacted by COVID-19, as identified by state compliance reports. The PRT recognizes that these impacts may continue into 2021 for some monitoring programs.

## VIII. Research Recommendations

Research recommendations were developed by the 2018 Benchmark Stock Assessment Subcommittee and the $66^{\text {th }}$ SARC and are listed in the final stock assessment report starting on report page 569.

## X. Tables

Table 1. Summary of Atlantic striped bass commercial regulations in 2020. Source: 2021 State Compliance Reports. Minimum sizes and slot size limits are in total length (TL). *Commercial quota reallocated to recreational bonus fish program.

| STATE | SIZE LIMITS (TL) and TRIP LIMITS | SEASONAL QUOTA | OPEN SEASON |
| :---: | :---: | :---: | :---: |
| ME | Commercial fishing prohibited |  |  |
| NH | Commercial fishing prohibited |  |  |
| MA | $\geq 35$ " minimum size; no gaffing undersized fish. 15 fish/day with commercial boat permit; 2 fish/day with rod and reel permit. | 735,240 lbs. Hook \& Line only. | 6.24 until quota reached, Mondays and Wednesdays only. (In-season adjustment added Tuesdays effective Sept 1.) July 3rd, July 4th and Labor Day closed. Cape Cod Canal closed to commercial striped bass fishing. |
| RI | Floating fish trap: $26^{\prime \prime}$ minimum size unlimited possession limit until $70 \%$ of quota reached, then 500 lbs . per licensee per day | Total: 148,889 lbs., split 39:61 between the trap and general category. Gill netting prohibited. | 4.1-12.31 |
|  | General category (mostly rod \& reel): 34 " min. 5 fish/vessel/day limit. |  | 5.20-6.30, 7.1-12.31, or until quota reached. Closed Fridays, Saturdays, and Sundays during both seasons. |
| CT | Commercial fishing prohibited; bonus program in CT suspended indefinitely in 2020. |  |  |
| NY | 26"-38" size; (Hudson River closed to commercial harvest) | 640,718 lbs. Pound Nets, Gill Nets (6-8"stretched mesh), Hook \& Line. | $6.1-12.15$, or until quota reached. Limited entry permit only. |
| NJ* | Commercial fishing prohibited; bonus program: 1 fish at $24^{\prime \prime}$ to $<28^{\prime \prime}$ slot size | 215,912 lbs. | 5.15 - 12.31 (permit required) |
| PA | Commercial fishing prohibited |  |  |
| DE | Gill Net: $20^{\prime \prime} \mathrm{min}$ in DE Bay/River during spring season. $28^{\prime \prime}$ in all other waters/seasons. | Gillnet: $135,350 \mathrm{lbs}$. No fixed nets in DE River. | Gillnet: 2.15-5.31 (2.15-3.30 for Nanticoke River) \& 11.15-12.31; drift nets only 2.15-28 \& 5.1-31; no trip limit. |
|  | Hook and Line: $28{ }^{\prime \prime}$ min | Hook and line: 7,124 lbs. | Hook and Line: 4.1-12.31, $200 \mathrm{lbs} . /$ day trip limit |

(Table 1 continued - Summary of commercial regulations in 2020).

| STATE | SIZE LIMITS (TL) and TRIP LIMITS | SEASONAL QUOTA | OPEN SEASON |
| :---: | :---: | :---: | :---: |
| MD | Chesapeake Bay and Rivers: 18-36" Common pool trip limits: Hook and Line - 250 lbs ./license/week Gill Net - 300 lbs ./license/week | 1,445,394 Ibs. (part of Bay-wide quota) - Initial quota <br> 1,442,120 lbs. - Adjusted quota due to 2019 overage | Bay Pound Net: 6.1-12.31 <br> Bay Haul Seine: 6.1-12.31 <br> Bay Hook \& Line: 6.4-12.31 <br> Bay Drift Gill Net: 1.1-2.28, 12.1-12.31 |
|  | Ocean: 24 " minimum | Ocean: 89,094 lbs. | 1.1-5.31, 10.1-12.31 |
| PRFC | $18^{\prime \prime}$ min all year; 36" max 2.15-3.25 | 572,861 lbs. (part of Bay-wide quota) | Hook \& Line: 1.1-3.25, 6.1-12.31 <br> Pound Net \& Other: 2.15-3.25, 6.1-12.15 <br> Gill Net: 1.1-3.25, 11.9-12.31 <br> Misc. Gear: 2.15-3.25, 6.1-12.15 |
| VA | Bay and Rivers: $18{ }^{\prime \prime}$ min; $28^{\prime \prime}$ max size limit $3.15-6.15$ | 983,393 lbs. (part of Bay-wide quota) | 1.16-12.31 |
|  | Ocean: $28{ }^{\prime \prime} \mathrm{min}$ | 125,034 lbs. |  |
| NC | Ocean: 28" min | 295,495 lbs. (split between gear types). | Seine fishery was not opened Gill net fishery was not opened Trawl fishery was not opened |

Table 2. Summary of Atlantic striped bass recreational regulations in 2020. Source: 2021 State Compliance Reports. Minimum sizes and slot size limits are in total length (TL).

| STATE | SIZE LIMITS (TL)/REGION | BAG LIMIT | GEAR/FISHING RESTRICTIONS | OPEN SEASON |
| :---: | :---: | :---: | :---: | :---: |
| ME | $\geq 28^{\prime \prime}$ and $<35^{\prime \prime}$ | 1 fish/day | Hook \& line only; circle hooks only when using live bait | All year, except spawning areas are closed 12.1-4.30 and C\&R only 5.1- $6.30$ |
| NH | $\geq 28^{\prime \prime}$ and $<35^{\prime \prime}$ | 1 fish/day | Gaffing and culling prohibited; Use of corrodible non-offset circle hooks required if angling with bait | All year |
| MA | $\geq 28^{\prime \prime}$ and $<35^{\prime \prime}$ | 1 fish/day | Hook \& line only; no high-grading; gaffs and other injurious removal devices prohibited. Private angler circle hook requirement when fishing with natural bait (exception for artificial lures). | All year |
| RI | $\geq 28^{\prime \prime}$ and $<35^{\prime \prime}$ | 1 fish/day | The use of circle hooks is required by any vessel or person while fishing recreationally with bait for striped bass | All year |
| CT | $\geq 28^{\prime \prime}$ and $<35^{\prime \prime}$ | 1 fish/day | Inline circle hooks only when using whole, cut or live natural bait (Dec 1st, 2020). Spearing and gaffing prohibited | All year |
| NY | Ocean and DE River: Slot Size: 28-35 | 1 fish/day | Angling only. Spearing permitted in ocean waters. C\&R only during closed season. | Ocean: 4.15-12.15 <br> Delaware River: All year |
|  | HR: Slot Size: 18-28 | 1 fish/day | Angling only. | Hudson River: 4.1-11.30 |
| NJ | 1 fish at 28 to $<38^{\prime \prime}$ (effective 4/1/2020) | 1 fish/day | Non-offset circle hooks must be used when using bait with a \#2 sized hook or larger in Delaware River \& tributaries from 4.1-5.31. | Closed 1.1 - Feb 28 in all waters except in the Atlantic Ocean, and closed 4.1-5.31 in the lower DE River and tributaries |
| PA | Upstream from Calhoun St Bridge: 1 fish at $\geq 28$ " to $<35{ }^{\prime \prime}$ |  |  |  |
|  | Downstream from Calhoun St Bridge: 1 fish at $\geq 28^{\prime \prime}$ to $<35$, and 2 fish at 21-24" slot size limit from 4.1 - 5.31 |  |  |  |

(Table 2 continued - Summary of recreational regulations in 2020).

| STATE | SIZE LIMITS/REGION | BAG LIMIT | GEAR/FISHING RESTRICTIONS | OPEN SEASON |
| :---: | :---: | :---: | :---: | :---: |
| DE | $\geq 28^{\prime \prime}$ and $<35^{\prime \prime}$ | 1 fish/day | Hook \& line, spear (for divers) only. Circle hooks required in spawning season. | All year. C\&R only 4.1-5.31 in spawning grounds. 20"-25"slot from 7.1-8.31 in DE River, Bay \& tributaries |
| MD | Ocean: $\geq 28$ " and $<35{ }^{\prime \prime}$ | 1 fish/day |  | All year |
|  | Chesapeake Bay and tribs^ | C\&R only | no eels; no stinger hooks; barbless hooks when trolling; circle or J-hooks when using live bait; max 6 lines when trolling | 1.1-2.28, 3.1-3.31, 12.11-12.31 |
|  | Chesapeake Bay: 35" min | 1 fish/day | Geographic restrictions apply. | 5.1-5.15 |
|  | Chesapeake Bay: 1 fish/day, 19" minimum size; $2 /$ fish/day for charter with only 1 fish >28" |  | Geographic restrictions apply; circle hooks if chumming or live-lining; no treble hooks when bait fishing. | 5.16-5.31 |
|  | Chesapeake Bay and tribs: 1 fish/day, 19" minimum size; 2/fish/day for charter with only 1 fish >28" |  | All Bay and tribs open; circle hooks if chumming or live-lining; no treble hooks when bait fishing. | 6.1-8.15, 9.1-12.10 |
| PRFC | Spring Trophy: 1 fish/day, 35 " minimum size |  | No more than two hooks or sets of hooks for each rod or line; no live eel; no high-grading | 5.1-5.15 |
|  | Summer and Fall: 2 fish/day, 20 " min |  | No more than two hooks or sets of hooks for each rod or line. | 5.16-7.6 and 8.21-12.31; closed 7.7-8.20 (No Direct Targeting) |

[^5](Table 2 continued - Summary of recreational regulations in 2020).

| STATE | SIZE LIMITS/REGION | BAG LIMIT | GEAR/FISHING RESTRICTIONS | OPEN SEASON |
| :---: | :---: | :---: | :---: | :---: |
| DC | $18^{\prime \prime}$ minimum size | 1 fish/day | Hook and line only | 5.16-12.31 |
| VA | Ocean: $28{ }^{\prime \prime}-36^{\prime \prime}$ slot limit | 1 fish/day | Hook \& line, rod \& reel, hand line only. No gaffing. Circle hooks required if/when fishing with live bait (as of July 2020). | 1.1-3.31, 5.16-12.31 |
|  | Ocean Spring Trophy: NO SPRING TROPHY SEASON |  |  |  |
|  | Chesapeake Bay Spring Trophy: NO SPRING TROPHY SEASON |  |  |  |
|  | Bay Spring: 20"-28" slot limit | 1 fish/day | Hook \& line, rod \& reel, hand line only. No gaffing. Circle hooks required if/when fishing with live bait (as of July 2020). | 5.16-6.15 |
|  | Bay Fall: 20-36" slot limit | 1 fish/day | Hook \& line, rod \& reel, hand line only. No gaffing. Circle hooks required if/when fishing with live bait (as of July 2020). | 10.4-12.31 |
| NC | $\geq 28^{\prime \prime}$ and $<35^{\prime \prime}$ | 1 fish/day | No gaffing allowed. Circle hooks required when fishing with natural bait. | All year |

Table 3. Total removals (harvest plus discards/release mortality) of Atlantic striped bass by sector in numbers of fish, 1990-2020. Note: Harvest is from state compliance reports/MRIP (July 8, 2021), discards/release mortality is from ASMFC. Estimates exclude inshore harvest from North Carolina.

| Year | Commercial |  | Recreational |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Harvest | Discards* | Harvest | Release <br> Mortality |  |
| 1990 | 93,888 | 47,859 | 578,897 | 442,811 | $1,163,455$ |
| 1991 | 158,491 | 92,480 | 798,260 | 715,478 | $1,764,709$ |
| 1992 | 256,476 | 193,281 | 869,779 | 937,611 | $2,257,147$ |
| 1993 | 314,526 | 115,859 | 789,037 | 812,404 | $2,031,826$ |

+ 2020 quota changed through conservation equivalency for MA, NY, NJ, DE, MD, PRFC, VA.
*MA and NY 2020 quotas were based on an $18 \%$ reduction from 2017 quota and spawner-perrecruit (SPR) analysis that accounted for changing the commercial size limits.
${ }^{\wedge}$ North Carolina reported no offshore commercial harvest in 2017 and 2020.
Note: Some states chose a less than $18 \%$ commercial quota reduction in exchange for a greater than $18 \%$ reduction in recreational removals in their CE plans.

Table 15. Contribution of imputed data to 2020 MRIP estimates for Atlantic striped bass by state. Source: MRIP (Query July 8, 2021).

| State | Contribution of <br> Imputed Data to <br> Observed Harvest <br> (A) Rate | Contribution of <br> Imputed Data to <br> Reported Harvest <br> (B1) Rate | Contribution of <br> Imputed Data to <br> Released Alive <br> (B2) Rate |
| :---: | :---: | :---: | :---: |
| Maine | $0 \%$ | $0 \%$ | $0 \%$ |
| New Hampshire | $12 \%$ | $100 \%$ | $7 \%$ |
| Massachusetts | $4 \%$ | $2 \%$ | $3 \%$ |
| Rhode Island | $1 \%$ | $0 \%$ | $13 \%$ |
| Connecticut | $87 \%$ | $28 \%$ | $56 \%$ |
| New York | $69 \%$ | $13 \%$ | $9 \%$ |
| New Jersey | $57 \%$ | $36 \%$ | $32 \%$ |
| Delaware | $59 \%$ | $0 \%$ | $13 \%$ |
| Maryland | $9 \%$ | $8 \%$ | $7 \%$ |
| Virginia | $7 \%$ | $4 \%$ | $36 \%$ |
| North Carolina | $42 \%$ | $84 \%$ | $73 \%$ |

Note from MRIP: Due to COVID-related disruptions to the Access Point Angler Intercept Survey and subsequent gaps in catch records, 2020 catch estimates are based in part on imputed data. Columns labeled 'Contribution of Imputed Data to \{ESTIMATE\} rate' represent the weighted percentage of catch rate information that can be attributed to imputed catch data.

Table 16. State circle hook requirements (excerpt from state regulations as of July 2021) as compared to the Board-approved bait definition and incidental catch guidance (listed below) for Addendum VI. Source: State regulations (linked in table).
$\mathrm{Y}=$ state adopted Board-approved bait definition, exemption for artificial lure with bait attached, and/or incidental catch guidance; $M R=$ state regulations are more restrictive than the bait definition and/or exemption for artificial lure with bait attached; $N=$ state has not adopted incidental catch guidance.

Definition of Bait and Methods of Fishing: Circle hooks are required when fishing for striped bass with bait, which is defined as any marine or aquatic organism live or dead, whole or parts thereof. This shall not apply to any artificial lure with bait attached.
Guidance on Incidental Catch: Striped bass caught on any unapproved method of take must be returned to the water immediately without unnecessary injury.

| STATE | CIRCLE HOOK REQUIREMENT | BAIT DEFINITION | METHOD EXEMPT | INCIDENTAL CATCH GUIDANCE |
| :---: | :---: | :---: | :---: | :---: |
| ME | It is unlawful to use any hook other than a circle hook when using bait...Striped bass incidentally caught on any unapproved hook type must be returned to the water immediately without unnecessary injury. For the purposes of this section, bait is defined as any marine or freshwater organism live or dead, whole or parts thereof, and earthworms, including but not limited to, night crawlers (Lumbricus terrestris). <br> Exception: Rubber or latex tube rigs will be exempt from the circle hook restriction as long as they conform with the following: the lure must consist of a minimum of 8 " of latex or rubber tubing with a single hook protruding from the end portion of the tubing where bait may be attached. Use of treble hooks is not allowed with these rigs | MR | MR | Y |
| NH | Non-offset, corrodible circle hooks required if angling with bait. | MR* | MR | $N$ |
| MA | Mandatory Use of Circle Hooks. Recreational fishermen shall use circle hooks when fishing for striped bass with whole or cut natural baits. This shall not apply to any artificial lure. Striped bass caught on any unapproved method of take must be returned to the water immediately without unnecessary injury. <br> Bait means any marine or aquatic organism, live or dead, whole or parts thereof. | Y | Y | Y |

(Table 16 continued - Summary of circle hook regulations).

| STATE | CIRCLE HOOK REQUIREMENT | BAIT DEFINITION | METHOD EXEMPT | INCIDENTAL CATCH GUIDANCE |
| :---: | :---: | :---: | :---: | :---: |
| $\underline{\text { RI }}$ | F. Circle hooks: 1 . The use of circle hooks is required by any person while fishing recreationally with bait for striped bass. <br> a. Bait is defined as any marine or aquatic organism live or dead, whole or parts thereof. <br> b. The circle hook requirement shall not apply to any artificial lure with bait attached. <br> 2. Striped bass caught on any unapproved method of take must be returned to the water immediately without unnecessary injury. | Y | Y | Y |
| CT | No person shall engage in angling for striped bass with natural bait unless such person uses an inline circle hook. Any striped bass taken incidentally by use of natural bait on a hook other than an inline circle hook shall be returned immediately to the waters from which taken. The provisions of this subsection (h) shall not apply to any artificial lure with bait attached, or to the use of a fly...For purposes of this subsection, "natural bait" means any organism, in whole or in part, that is live or dead | MR | Y | Y |
| NY | Recreational anglers are required to use a non-offset (inline) circle hook when fishing for striped bass when using any marine or aquatic organism or terrestrial invertebrate, live or dead, whole or parts thereof. This requirement shall not apply to any artificial lure with any marine or aquatic organism or terrestrial invertebrate, live or dead, whole or parts thereof attached. Striped bass caught on any unapproved method of take must be returned to the water immediately without unnecessary injury. | MR | Y | Y |
| NJ | Pending (expected 10/4/2021) N.J.A.C. 7:25-18.1: <br> Hook and line fishermen are restricted to the use of non-offset circle hooks while fishing with bait. Bait is defined as any marine or aquatic organism live or dead, whole or parts thereof. This restriction shall not apply to an artificial lure with bait attached. A circle hook is a non-offset hook where the point is pointed perpendicularly back towards the shank. Non-offset means that the point and barb are in the same plane as the shank. Striped bass caught using an unapproved method of take must be returned to the water immediately without unnecessary injury. | Pending | Pending | Pending |
| PA | It is unlawful to fish with bait for any species of fish in the tidal Delaware Estuary, including tributaries from the mouths of the tributaries upstream to the limit of tidal influence using any hook type other than non-offset (in-line) circle hooks. | MR* | MR | N |

(Table 16 continued - Summary of circle hook regulations).

| STATE | CIRCLE HOOK REQUIREMENT | BAIT DEFINITION | METHOD EXEMPT | INCIDENTAL CATCH GUIDANCE |
| :---: | :---: | :---: | :---: | :---: |
| DE | It is unlawful for any recreational fisherman to fish for striped bass with bait using any hook other than a non-offset circle hook. This shall not apply to any artificial lure with bait attached. "Bait" means any marine or aquatic organism live or dead, whole or parts thereof. | Y | Y | Y |
| MD | Chesapeake Bay and Tributaries: (2) When fishing for striped bass, a person recreationally angling in the Chesapeake Bay or its tidal tributaries shall only use a circle hook when using fish, crabs, or worms as bait, or processed bait. <br> Atlantic Ocean: When fishing for striped bass, a person recreationally angling in the Atlantic Ocean, its coastal bays, or their tributaries shall only use a circle hook when using fish, crabs, or worms as bait, or processed bait. <br> "Fish" means finfish, crustaceans, mollusks, and amphibians and reptiles which spend the majority of their life cycle in water, and any part, egg, offspring, or dead body of any of these species. | MR | MR | N |
| PRFC | Non-offset (inline) Circle Hooks are required to be used when using cut or whole natural bait. | MR* | MR | N |
| DC | The mandatory use of non-offset circle hooks will be required when fishing for striped bass with bait to reduce release mortality in recreational fisheries. <br> In addition to anglers targeting striped bass, a non-offset circle hook will be required regardless of the targeted species when recreationally fishing with bait of any kind (e.g., fish, worms, shrimp, chicken livers, corn, dough balls) and using a hook size of number two (\#2) or greater. <br> Bait - does not include artificial lures (bucktails, crankbaits, rigged soft plastics, etc.), but does include any other fresh, frozen, live, cut, scented moldable offering used to attract fish. | MR | Y | N |
| VA | Any person fishing recreationally shall use non-offset, corrodible, non-stainless steel circle hooks when fishing with bait. <br> "Bait" means any whole or part of any marine or aquatic organism, live or dead. | Y | MR | N |
| NC | It is unlawful to fish for or possess striped bass from the Atlantic Ocean for recreational purposes using hook and line gear with natural bait unless using a non-stainless steel, non-offset (inline) circle hook, regardless of tackle or lure configuration. Natural bait is defined as any living or dead organism (animal or plant) or parts thereof. | MR | MR | N |

*The PRT assumes that if bait is not specifically defined, the regulation would be considered more restrictive since circle hooks would be required for any type of bait.

| PRFC | 313 | 81,525 | 68,939 | Harvest | Y | Y | N | Five tag colors by gear | N |
| VA | 374 | 185,350 | 130,373 | Harvest | Y | Y | Y | two tag colors by area | Y |
| NC^ | 46 | 33,560 | 26,895 | Sale | Y | Y | Y | Three tag colors by area | N |

${ }^{1}$ States are required to allocate commercial tags to permit holders based on a biological metric. Most states use the average weight per fish from the previous year, or some variation thereof. Actual biological metric used is reported in Annual Commercial Tag Monitoring Reports.
*The number of tags issued represent the combined total from tags used by harvesters and weigh stations, such that each fish has two tags. $\pm$ Unused tags are normally required to be returned to MDDNR to allow a thorough audit of tag use. This was not possible again in 2021 due to ongoing COVID-19 shutdowns. This audit may be revisited in the future as conditions allow.
$\wedge$ All commercial tags were used in the internal waters of North Carolina.

Table 18. Status of compliance with monitoring and reporting requirements in 2020. JAI = juvenile abundance index survey, $\mathrm{SSB}=$ spawning stock biomass survey, TAG = participation in coastwide tagging program, $\mathrm{Y}=$ compliance standards met, $\mathrm{N}=$ compliance standards not met, NA = not applicable, $\mathrm{R}=$ recreational, $\mathrm{C}=$ commercial.

| Jurisdiction | Fishery-independent Monitoring |  | Fishery-dependent Monitoring |  | Annual reporting Status |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Requirement(s) | Status | Requirement(s) | Status |  |
| ME | JAI | Y | - | NA | Y |
| NH | - | NA | - | NA | Y |
| MA | TAG* | Y | composition, catch \& effort (C\&R), tag program | Y | $Y$ |
| RI | - | NA | composition (C\&R), catch \& effort (R), tag program | $Y$ | Y |
| CT | - | NA | composition, catch \& effort (R) | $Y$ | $Y$ |
| NY | JAI, SSB*, TAG* | Y | composition, catch \& effort (C\&R), tag program | $Y$ | Y |
| NJ | JAI*, TAG* | Y | composition, catch \& effort (R) | $Y$ | Y |
| PA | SSB | Y | - | NA | Y |
| DE | SSB*, TAG* | Y | composition, catch \& effort (C), tag program | Y | Y |
| MD | JAI, SSB, TAG | Y | composition, catch \& effort (C\&R), tag program | Y | Y |
| PRFC | - | NA | composition, catch \& effort (C\&R), tag program | Y | Y |
| DC | - | NA | - | NA | Y |
| VA | JAI, SSB, TAG | Y | composition*, catch \& effort (C\&R), tag program | Y | Y |
| NC | JAI, SSB*, TAG* | Y | composition, catch \& effort (C\&R), tag program | Y | Y |

*Part or all of the monitoring program could not be conducted due to COVID-19.

## XI. Figures

Figure 2. Atlantic striped bass fishing mortality, 1982-2017. Source: 2018 Benchmark Stock Assessment.

Figure 3. Albemarle Sound-Roanoke River striped bass female spawning stock biomass and recruitment (abundance of age-1), and biological reference points, 1991-2017. Source: 2020 A-R Stock Assessment (Lee et al. 2020).

Figure 4. Albemarle Sounds-Roanoke River striped bass fishing mortality (F) estimates, and biological reference points, 1991-2017. Source: 2020 A-R Stock Assessment (Lee et al. 2020).

Figure 5. Total Atlantic striped bass removals by sector in numbers of fish, 1982-2020. Note: Harvest is from state compliance reports/MRIP, discards/release mortality is from ASMFC. Estimates exclude inshore harvest from A-R.

Figure 6. Commercial Atlantic striped bass landings by state in pounds, 1990-2020. Source: State compliance reports. Commercial harvest and sale prohibited in ME, NH, CT, and NJ. NC is ocean only.

Figure 7. Total recreational catch and the proportion of fish released alive, 1982-2020. Source: MRIP/ASMFC. Estimates exclude inshore harvest from A-R.

Figure 8. Juvenile abundance index analysis for Maine, New York, Jew Jersey, Maryland, Virginia, and North Carolina, 2020. Source: Annual State Compliance Reports. Q1 = first quartile. An open bar in the last three years indicates a value below the Q1 threshold.

[^0]:    ${ }^{1}$ The 1997 reauthorization of the Striped Bass Act also required the Secretaries of Commerce and Interior provide a biennial report to Congress highlighting the progress and findings of studies of migratory and estuarine Striped Bass. The ninth such report was recently provided to Congress (Shepherd et al. 2017).

[^1]:    ${ }^{2}$ While NOAA Fisheries continues to implement a complete ban on the fishing and harvest of striped bass in the EEZ, Amendment 6 includes a recommendation to consider reopening the EEZ to striped bass fisheries. In September 2006, NOAA Fisheries concluded that it would be imprudent to open the EEZ to striped bass fishing because it could not be certain that opening the EEZ would not lead to increased effort and an overfishing scenario.
    ${ }^{3}$ The decision to hold Delaware's commercial quota at the 2002 level is based on tagging information that indicated F on the Delaware River/Bay stock is too high, and uncertainty regarding the status of the spawning stock for the Delaware River/Bay.

[^2]:    ${ }^{4}$ In February 2017, the Board initiated development of Draft Addendum V to consider liberalizing coastwide commercial and recreational regulations. The Board's action responded to concerns raised by Chesapeake Bay jurisdictions regarding continued economic hardship endured by its stakeholders since the implementation of Addendum IV and information from the 2016 stock assessment update indicating that $F$ was below target in 2015, and that total removals could increase by $10 \%$ to achieve the target F. However, the Board chose to not advance the draft addendum for public comment largely due to harvest estimates having increased in 2016 without changing regulations. Instead, the Board decided to wait until it reviews the results of the 2018 benchmark stock assessment before considering making changes to the management program.

[^3]:    ${ }^{5}$ See the March 2021 meeting summary for more details.
    ${ }^{6}$ Definition of Bait and Methods of Fishing: Circle hooks are required when fishing for striped bass with bait, which is defined as any marine or aquatic organism live or dead, whole or parts thereof. This shall not apply to any artificial lure with bait attached.
    ${ }^{7}$ Guidance on Incidental Catch: Striped bass caught on any unapproved method of take must be returned to the water immediately without unnecessary injury.

[^4]:    ${ }^{8}$ Commercial dead discard estimates are derived via a generalized additive model (GAM), and are therefore re-estimated for the entire time series when a new year of data is added.
    ${ }^{9}$ By weight, New Jersey had the largest proportion of harvest (44\%), followed by Maryland (23\%), New York (15\%), Connecticut (6\%), and Massachusetts (5\%) (Table 8).

[^5]:    ^ Susquehanna Flats: C\&R only Jan 1 - March 31 (no treble hooks when bait fishing); 1 fish at 19"-26" slot May 16 - May 31.

[^6]:    * Commercial dead discard estimates are derived via a generalized additive model (GAM), and are therefore reestimated for the entire time series when a new year of data is added.

[^7]:    * Commercial dead discard estimates are derived via a generalized additive model (GAM), and are therefore re-estimated for the entire time series when a new year of data is added.
