### ASMFC Black Sea Bass Board Finalizes 2012 Recreational Measures

Arlington, VA – Upon review of the latest black sea bass recreational data from last year (waves 1 – 6), the Commission's Summer Flounder, Scup, and Black Sea Bass Management Board has modified the percent that states may liberalize their 2012 recreational management measures to achieve the 1.32 million pound (942,857 fish) harvest limit for the 2012 fishery. The northern region states of Massachusetts through New Jersey will implement measures that achieve a 37% liberalization throughout the region and a 32% liberalization coastwide; the percent of liberalization will vary by state. Northern region states had the option to collectively liberalize regulations by 41% but opted to be more conservative. State-specific regulations follow below.

State	Minimum Size (inches)	Possession Limit	Open Season
Massachusetts	14	10 fish	May 11 – June 24
		20 fish	June 25 – October 31
Rhode Island	13	15 fish	June 15 – December 31
Connecticut	13	15 fish	June 15 – December 31
New York	13	15 fish	June 15 – December 31
New Jersey	Still finalizing measures		
Delaware	12.5	25 fish	May 22 – October 14 November 1 – December 31
Maryland	12.5	25 fish	May 22 – October 14 November 1 – December 31 (Season may change depending on federal regulations)
Virginia	12.5	25 fish	May 19 – October 14 November 1 – December 31
PRFC	12.5	25 fish	May 19 – October 14 November 1 – December 31
North Carolina (North of Hatteras)	12.5	25 fish	May 19 – October 14 November 1 – December 31

The Atlantic States Marine Fisheries Commission was formed by the 15 Atlantic coastal states in 1942 for the promotion and protection of coastal fishery resources. The Commission serves as a deliberative body of the Atlantic coastal states, coordinating the conservation and management of nearshore fishery resources, including marine, shell and diadromous species.

Since the Board's approval of Addendum XXII and the resultant 2012 state recreational management measures in February 2012, new 2011 recreational harvest estimates were released by the National Marine Fisheries Service. The data indicates the projections used to form the basis of this year's regulations underestimated the 2011 harvest. Coastwide recreational harvest for the 2011 black sea bass fishery is now estimated at 713,478 fish (versus the initial estimate of 654,142 fish). As a result of the new estimate, northern states will still be able to liberalize their 2012 recreational management measures but not to the extent that they would have under the previous estimate (initial liberalization was 57%). The northern states will be working over the next month to finalize their recreational black sea bass management measures.

Based on the stock projections completed in 2011, the black sea bass stock is not overfished and overfishing is not occurring. The projections indicate the stock is at about 111% of its biomass target.
